Thomas M. Sweeney II, MD, PhD

Southeastern Educational & Technical Institute was inspired by Thomas M Sweeney II, MD, PhD, founder. A primary focus for SETI is to offer healthcare professionals a venue to extend their education through didactic workshops and hands-on cadaveric skills training. As healthcare continues to advance in technological procedures and medical treatments in all areas of medicine, it is vital that physicians, surgeons, PA's, ARNP's, nurses, therapists, and other allied healthcare professionals stay abreast of these changes and keep pace with the advances.

SETI is committed to be a leader in providing educational opportunities for healthcare professionals to advance their skills and knowledge.

SETI is not limited though to only medical technology and healthcare, but offers diverse curriculum of workshops for learning needs in areas of customer service, sales and marketing, leadership development, and other management and operational topics.

WHY CHOOSE SETI?

SETI is located in Sarasota, Florida. There is no better place to host your educational event than this extraordinary city full of charm, sunshine, and lots of extracurricular activities.

Sarasota and her Islands offer rolling white-sand beaches and sparkling azure waters combined with a sophistication and charm to make Sarasota the gem of Florida's Gulf Coast. The endless array of activities and the exhilarating mixture of attractions, restaurants, shopping, and accommodations are a sure fit for any traveler.

Relax at a four-star resort or a quaint sea-side inn, explore master works of art, catch a round of golf, stroll through world-class shopping, canoe through unspoiled mangrove-lined waterways, dine on a bay front cruise, or just dig your feet in the sand and bask in the glow of an evening Gulf sunset, whatever your pleasure.

What an optimal setting to host your educational event with such a spectacular location and superb training facility and services.

FACILITIES

To assist in making your workshop a monumental success our on-site services include:

- Tissue procurement and processing
- Sawbones procurement
- Trained, experienced lab and support staff
- Basic surgical instruments
- Personal protective equipment
- Lab set up and clean up
- Bio-hazardous disposals
- Lead aprons
- C-arms, light sources, suction, bovies
- Internet access
- Post-lab mailing and shipping assistance

The Conference Room at SETI is available to accommodate up to 18 people and includes an adjoining refreshment break room. Accessories available include flip charts, speaker phone, LCD player, laser pointer, screen, white dry erase board TV and VCR, and x-ray view box.

Rental charges are based on a number of factors including:

- Amenities: optional items and services
- Number of bio-skills stations needed
- Type of cadaver specimen
- Meals and other catering

We will be happy to prepare a specific quote for anyone or any group seeking to rent the BioSkills Laboratory.

BIOSKILLS TRAINING CENTER

Our bio-skills training lab is one venue that helps to facilitate ongoing hands-on education for many healthcare professionals. This is not limited to just surgeons, but also physicians, medical students/fellows/residents, nurses, physician assistants, therapists, researchers, and other medical specialists.

SETI believes the most successful venue is that of an intimate one-on-one interactive sessions with physicians to facilitate learning and the opportunity to relationship build. We offer up to 4 stations in our on-site lab and can accommodate up to 10 stations off site.

The Medical Community...

This offers the healthcare professional the opportunity to learn surgical procedures in an environment that is similar to a surgical suite for the newest techniques with cutting-edge technology and medical devices. The bio-skills lab utilizes both saw-bones and cadaveric tissue to help surgeons refine their skills in surgical interventions.

The Medical Manufacturing Industry...

The bio-skills lab offers a venue for the continued research and development of devices by medical corporations.

Researchers...

Physicians and engineers working together utilize the lab for development and training on advancements in medicine. This can include both techniques and tools or devices.

Primary and Secondary Schools..

In collaboration with the National Spine Foundation, SETI's bio-skills lab helps to provide students in primary and secondary school an extended learning opportunity for advancements in science and medicine.

CLIENTS & SPONSORS

SETI is dedicated to hosting medical programs and training courses where companies can introduce the latest techniques and technologies to its course participants. Whether it might be a didactic presentation, a live interactive surgery, a hands-on cadaveric dissection workshop, or a case presentation, course participants are able to explore the latest technological advances in modern day medicine.

Clients that have placed their confidence in the expertise of our staff and facility include not only local and regional corporations, but also nationally recognized leading medical companies.

Some of the clients we have served and corporations that have sponsored events with SETI include:

Endius Inc	Applied Spine	Advanced Physical Therapy
Zimmer Spine	Ulrich Medical USA	Suncoast MRI
Vertiflex Inc	FacetSolutions Inc.	Suncoast Medical Documents
Abbott Laboratories	Medtronic	Partners in Practice
Paradigm	Dimensional Imaging	The Scrub Club

XLIF® EXTREME LATERAL INTERBODY FUSION

**Greater Access. Better Visualization.
Minimally Disruptive.**

XLIF® – The revolutionary approach that turned spine surgery on its side.
The NuVasive® XLIF procedure is a safe and reproducible means of addressing spine disorders using a lateral approach rather than a traditional anterior or posterior approach. No disruption of the back muscles, bones, or ligaments is involved in the XLIF technique. As a result, operating time is reduced, patient blood loss is minimal, and recovery time is significantly shortened. A key component of the XLIF procedure, NeuroVision®, NuVasive's patented nerve monitoring system, assists the surgeon in reducing the incidence of injury to nerve roots.

XLIF from NuVasive is the only complete, clinically proven lateral access system.
